ATX® THERMONEST ECO farrowing and weaners

Why your pig pen needs an ATX Thermonest

- Innovative, robust, cost-saving, user-friendly piglet nest
- Lower energy use (up to 85%) and fewer crushed piglets = more profit
- Cleaning, maintenance, supervision, access, feeding and everyday tasks made easier
- Generates pleasant level of heat for sow and piglets with ATX IR AluXheat heating system
- Integrated safety thermostat and temperature limiter
- Precise and efficient temperature control with the ATX control unit

The benefits of the ATX Thermonest ECO compared to a standard nest

- Easy to clean thanks to polypropylene panels (PP)
- PP panels are fully recyclable, reducing your carbon footprint
- Thermonest ECO made from one material (PP) for significantly more flexible production
- Tailored solution and in-house production in Switzerland at ATX

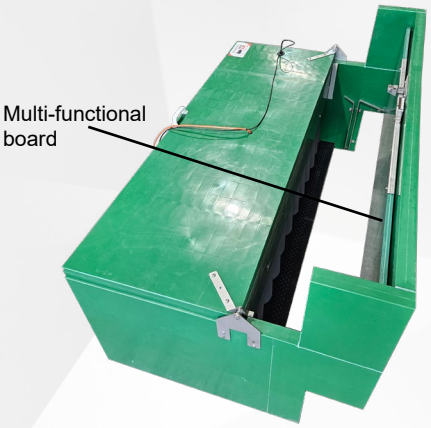
ATX Thermonest ECO

Temperature stability is crucial to the survival rate of suckling piglets. Directing new-born piglets into the warmed piglet nest as quickly as possible is a real challenge, especially in farrowing pens designed for free farrowing. With the new ECO model, the curtain is fixed directly to the PP panel using an innovative process for a secure hold and can be raised/locked with one hand. The separation board can also be flipped over to divert heat into the pen better. The ECO model is noticeably more user-friendly and is easier to use, clean and inspect.



ATX heat conducting function

- Virtually no crushed piglets: Mortality (total) below 7%
- Get suckling pigs straight into heated area: Increase daily growth by up to 30%
- Multi-functional board for heat conducting function and keeping piglets locked in nest
- Easy to use with quick, one-handed operations
- Less help required during birth
- Virtually zero energy loss: heat only escapes during birth

EuroTier 2024: Innovation Award Silver Medal

ATX Thermonest ECO weaners

With the ATX Thermonest Eco, you create optimal conditions for rearing. Made of insulated PP panels and equipped with an efficient heating system, the nest provides a comfortable climate, greater well-being and higher daily weight gains. The insulated Thermopig curtain is mounted directly on the lid. Thanks to the central motorised lid lift, all lids open easily at the push of a button.
